

BENEFITS

Free environment and transition assessment reduces impact of failed implementations.

Easy to implement replacement system quickly gets data protection up and running with minimal system impact.

Priority scheduling with professional services support to meet critical deadlines.

“We were very disappointed with the ability to support our application-level encryption solution. Through the Get Operational program we quickly moved to a much easier, higher performance solution - with stronger protection that stayed within our budget”

*VP of Security
Major Financial Services Co.*

Failed application or column level encryption project?

Implementing encryption within applications and databases can be a difficult task, made even more difficult when an implementation fails. Column and application-level approaches have caused many failed projects and wasted spending. While some systems can accept these invasive encryption methods, many have failed due to:

- Substandard performance
- Inability to integrate
- Breaking application processes
- Breaking operational processes

Vormetric Data Security Expert is the only solution proven to provide application and database transparent security for any file, any database, anywhere - achieving strong success both in centralized and distributed environments. Data Security Expert's unique approach to not only encrypting, but wholly protecting data via access control, integrity and audit features, allows organizations to obtain a single, extensible platform for encryption of both online and offline data.

The Get Operational by Vormetric Program is specifically designed to help organizations ease the financial and operational burden of other methods by shifting to the easier to implement, easier to manage Data Security Expert Solution. This program includes:

- Free transition assessment to deliver a solid analysis of options, impact and level of effort required to remove current encryption methods from existing infrastructure, if installed. If the current product is not installed, Vormetric will deliver a free implementation assessment for the Vormetric solution. This transition assessment will be delivered at no charge by Vormetric data security and infrastructure experts.
- Special transition pricing and incentives to ease the financial burden on enterprises that have already borne encryption and data security product purchase costs.
- Professional services scheduling priority to remove the risk to data, applications and business processes that are caused by poor performance and service interruptions and quickly as possible.

About Vormetric

Vormetric is a leading provider of solutions for protecting enterprise information from unauthorized access or theft. Founded in 2001, Vormetric is a privately held company with headquarters in Santa Clara, California.
